Technology Fee

In October of 2004 the Gresham City Council approved Resolution No. 2703 which created a technology fee to be assessed on all development related fees and charges.

The purpose of this fee is to finance the purchase of a new citywide permitting software system as well as the other expenses associated with implementing a new system such as data conversion, training, testing, and implementation.

Additionally, the revenues generated from the technology fees are used for the annual costs related to maintaining a citywide permitting software system.

The technology fee is 1% of the application or permit fee.
